Section 4. First aid measures		
Inhalation:	Should not be a problem as product is of low volatility. However, if feeling unwell remove patient to fresh air.	
Skin contact:	Seek medical advice. Rinse with running water and soap.	
Eye contact:	Rinse immediately with plenty of running water (for 10 minutes). Seek medical attention if necessary.	
Ingestion:	Seek medical advice. Rinse out mouth, drink 1-2 glasses of water, do not induce vomiting.	
Indication of immediate medical attention and special treatment needed:	See section: Description of first aid measures	
Section 5. Fire fighting measures		
Suitable extinguishing media:	Carbon dioxide, foam, powder	
Special protection equipment and precautions for firefighters:	Wear self-contained breathing apparatus and full protective clothing, such as turn-out gear.	
Hazardous combustion products:	Oxides of carbon, oxides of nitrogen, irritating organic vapors.	
Additional fire fighting advice:	In case of fire, keep containers cool with water spray.	

Section 6. Accidental release measures		
Personal precautions:	Ensure adequate ventilation.	
	See advice in section 8	
Environmental precautions:	Do not let product enter drains.	
Clean-up methods:	For small spills wipe up with paper towel and place in container for disposal.	
-	For large spills absorb onto inert absorbent material and place in sealed container for disposal.	
	Wash spillage site thoroughly with soap and water or detergent solution.	
	Dispose of contaminated material as waste according to Section 13.	

# Section 7. Handling and storage

Handling:	Use only in well-ventilated areas. Avoid skin and eye contact. Prolonged or repeated skin contact should be avoided to minimise any risk of sensitisation.
Storage:	Store in original containers at 8-21°C (46.4-69.8°F) and do not return residual materials to containers as contamination may reduce the shelf life of the bulk product.

Respiratory protection:	Ensure adequate ventilation. Do not inhale vapors and fumes.
Hand protection:	Chemical-resistant protective gloves (EN 374). Suitable materials for short-term contact or splashes (recommended: at least protection index 2, corresponding to > 30 minutes permeation time as per EN 374): nitrile rubber (NBR; >= 0.4 mm thickness) Suitable materials for longer, direct contact (recommended: protection index 6, corresponding to > 480 minutes permeation time as per EN 374): nitrile rubber (NBR; >= 0.4 mm thickness) This information is based on literature references and on information provided by glove manufacturers, or is derived by analogy with similar substances. Please note that in practice the working life of chemical-resistant protective gloves may be considerably shorter than the permeation time determined in accordance with EN 374 as a result of the many influencing factors (e.g. temperature). If signs of wear and tear are noticed then the gloves should be replaced.
Eye protection:	Tightly fitting safety goggles Avoid eye contact.
Body protection:	Wear suitable protective clothing.
Engineering controls:	Ensure good ventilation/extraction.
Hygienic measures:	Wash hands before work breaks and after finishing work. Do not eat, drink or smoke while working. Good industrial hygiene practices should be observed.
